

Alfresco Mobile

The Rise of the Mobile Workforce

While the smartphone is now standard equipment in the enterprise, and the tablet — one of the fastest growing computing devices in history — is fundamentally changing the way that professionals work.

The tablet is no longer merely a window into the Internet, or a mobile email inbox, but has become a great medium for consuming enterprise documentation and is fast evolving into a tool for creating, editing and collaborating on all of our business critical content.

This is why Alfresco is concentrating on unleashing the power of the tablet, to truly mobilize global workforces and increase productivity, efficiency and mobility in all areas of the enterprise — let Alfresco Mobile turn your tablet into an enterprise grade mobile productivity machine.

The Challenges

A secure, reliable and flexible solution for working with corporate content has, until recently, been hard to find. Users have been bringing their own devices into the workplace, and with them they've brought consumer file sharing services, or have shared content via email. Neither of these approaches is right for the enterprise, and can pose a number of challenges to the IT department responsible for managing the organization's content.

Questions arise around security, compatibility, cost, support, corporate network access, personal versus private device usage, and eventual retrieval of data, which can make tablet adoption seem daunting to some. A solution to these and other potential issues is needed to enable enterprises to unleash the power of their employees' mobile devices — and that is where Alfresco Mobile comes in.

The Alfresco Mobile Solution

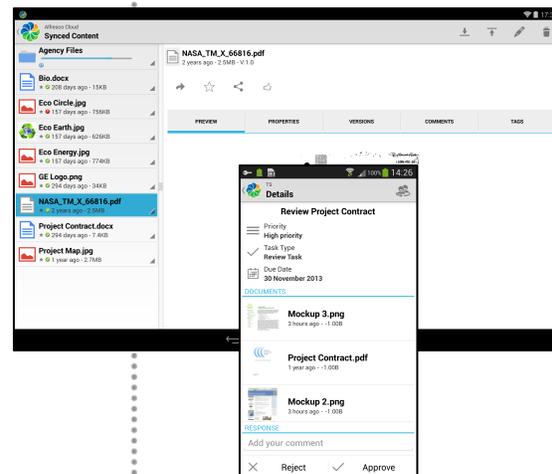

The Alfresco Mobile app provides users with access to their Alfresco One on-premise, or their Alfresco in the cloud account, and is available for iOS and Android

Alfresco Mobile provides your company with:

- ⊕ **Enhanced User Adoption of Document Management** — Mobile access to corporate content encourages adoption of document management.
- ⊕ **Increased Levels of Collaboration** — Interoperability between individuals and teams is made much easier with mobile devices — such as the ability to comment on content, amend and upload new versions and share content with users.
- ⊕ **Security & Access Control** — The server enforces existing corporate policies, only allowing the users access to the content for which they have the necessary permission. All data can be permanently encrypted, and only decrypted when accessed. Mobile Device Management options available with Good Technology, MobileIron and Symantec clients.
- ⊕ **Version Control** — The Alfresco document management server serves as the source for corporate documents, with full version control and no more out-of-date documents. Version history is maintained on the server and accessible from within the app, providing an audit trail of changes and the ability to revert back to a previous version if required.

Benefits of Alfresco Mobile include:

- Mobile access to all cloud and on-premise content — no need to carry a heavy laptop anymore
- Your business-critical content in sync and at your fingertips wherever you are.
- No added per-user costs for mobile apps
- Clean mobile UI with easy editing in apps, such as MS office or Apple iWork
- Reliable, customizable security options
- Open-source app, SDK and hybrid plug-ins for developing new solutions to extend Alfresco capabilities
- MDM options for managed deployments

Alfresco Datasheet

- ⊕ **Compatibility** — The Alfresco Mobile app manages a multitude of file types, and popular enterprise documents are easily opened and edited in your favorite apps such as MS Office, Keynote, Pages and PDF Expert. By having one consistent solution spanning your on-premise, cloud and mobile devices, questions of compatibility need never cause any issues.
- ⊕ **Personal vs. Business Device Usage** — Alfresco Mobile can help maintain a separation between personal and enterprise content. Use Alfresco to share, store and collaborate on corporate documents managed securely away from personal files.
- ⊕ **Retrieval of data** — If an employee leaves your business, you maintain all the data within your Alfresco system, so even if they take their device with them, you still retain all your valuable content. Site owners can then remove the permissions of the ex-employee, and they will no longer have access to the content. Alfresco can also retain an audit trail of all changes made to documents by employees or colleagues with whom they collaborate.
- ⊕ **No Added Costs** — As a free-to-download mobile app for iOS and Android devices, there is no license cost per-user to deploy to one or to tens of thousands of users.
- ⊕ **Custom Development Core** — Alfresco has released its mobile apps as open source projects, that customers or partners can use to jump-start custom app development. Developers can gain easy access to the Alfresco public API and Mobile SDK at developer.alfresco.com in order to make integration with other apps even more accessible, or to build their own custom apps against the Alfresco Mobile Platform.

The Alfresco Mobile application is a constantly evolving app that allows users to:

View:

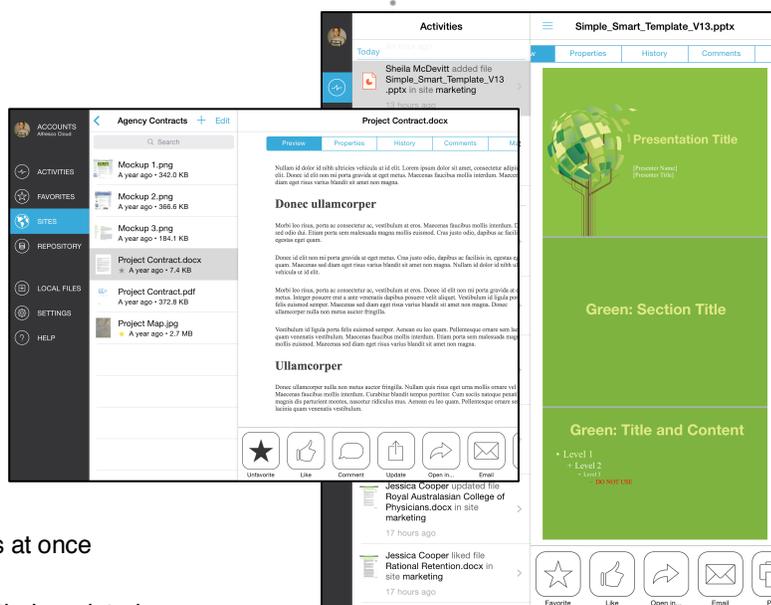

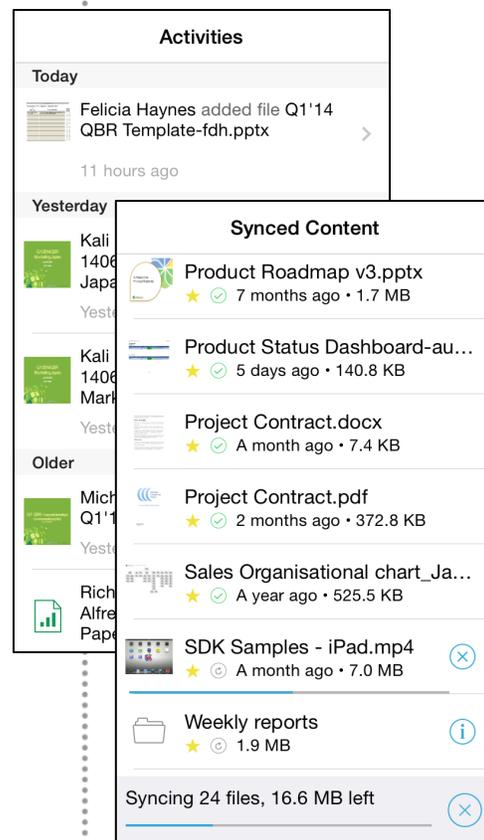

- Sync your favorite documents for offline viewing and editing
- Mark documents to sync from your device or desktop browser
- View Microsoft Office files, PDF, videos, images, etc.
- Join, favorite and navigate Alfresco Share™ sites
- Use full-screen view to present right from your device.
- View important metadata, including dates, authors, etc.
- Map the location of geo-tagged photos

Edit:

- Open documents in other apps for annotation or editing
- Record, tag, and upload images, video, and audio
- Send documents to Alfresco Mobile from apps such as Microsoft Office, Mail or QuickEdit
- Create folders and upload documents
- Create and edit simple text documents right from the app

Collaborate:

- Send documents for review and approval to multiple colleagues at once
- Create tasks for yourself or delegate with a few taps
- View an activity feed from your collaborators, with direct link to their updated documents
- Comment on documents and view comments from others

Alfresco Datasheet

- Easily email documents directly from the app
- Track document versions

Security:

- Connect to your Alfresco repository using your Alfresco log-in credentials
- Safely exchange data over HTTPS
- Protect your data with Full time data encryption option

The Alfresco Approach

Smartphones and tablets are emerging as groundbreaking tools that make things easier, quicker and more mobile in enterprise.

At Alfresco, we have developed mobile apps for iOS and Android devices, making our unique ECM features available to mobile workers using the most popular tablet and smartphone devices. Beyond those apps, Alfresco also makes an open source version available (unique in the industry) to help your company get started building its own specialized version, the Alfresco Mobile SDK is also available for integrations or to build your own app from the ground up, we also propose hybrid plug-ins for Appcelerator to get you started using Javascript and HTML skills, and from any device a touch optimized Alfresco Share is accessible via a browser.

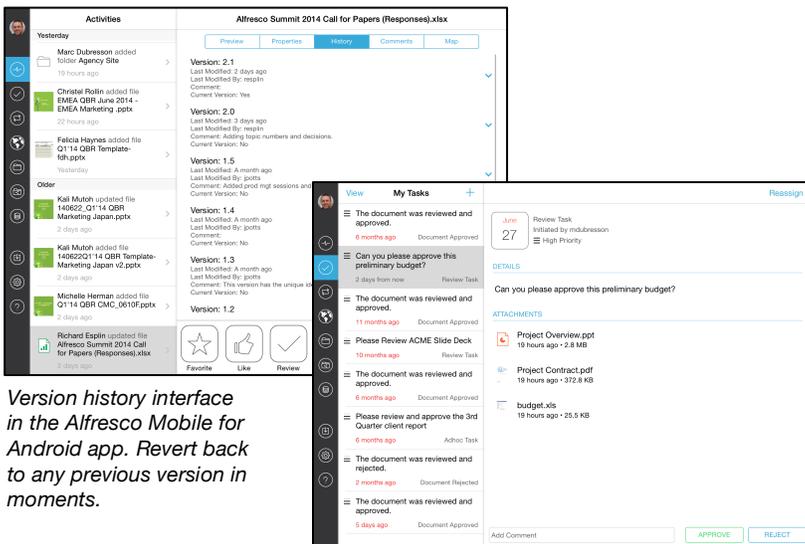

Download Alfresco Mobile for iOS at the iTunes App Store.

Download Alfresco Mobile for Android at Google Play.

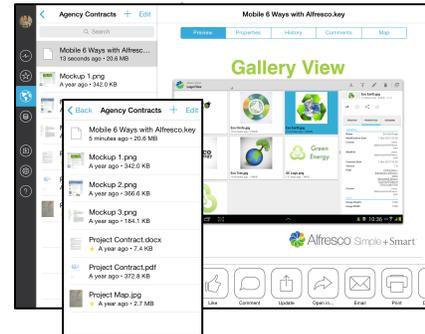

Visit our Developer pages at developer.alfresco.com, where you will be able to download the Alfresco API and Mobile SDK to start working Alfresco integration into your own apps

Version history interface in the Alfresco Mobile for Android app. Revert back to any previous version in moments.

Initiate review and approve workflow, assign to one or more assignees, and complete tasks using your iPad.

Alfresco helps teams share, manage and retain content across the extended enterprise with simplicity that end users love and smarts that IT can endorse. Alfresco enables organizations in more than 180 countries to collaborate more effectively, improve business process efficiency and ensure information governance. Across cloud, mobile, hybrid and on-premise environments, Alfresco is smart enterprise content made easy.
